Press Release

ZIGPOS product CORIVA is the first omlox-certified real-time localization system on the market

Dresden, 10.09.2024 – ZIGPOS GmbH is pleased to announce the successful certification of its latest product line CORIVA. The products CorivaTag Plus, CorivaTag (both trackers) and CorivaSat (positioning satellite) as well as the software CorivaEngine were the first to meet the strict requirements of omlox certification and are thus the first “omlox air 8 ready” devices on the market. Following intensive testing by the omlox test laboratory at Fraunhofer IOSB-INA, all products have received certification¹.

These products were developed in close cooperation with TRUMPF Tracking Technologies GmbH. This cooperation underscores how companies in the omlox ecosystem work in partnership to develop cross-manufacturer localization solutions that meet the highest standards. TRUMPF is already successfully using CORIVA products in its smart factory in the USA, where they are in productive use and setting new standards in production efficiency. This successful partnership is a strong example of the synergy between leading providers in the omlox network.

With omlox certification, ZIGPOS is setting a new standard in cross-manufacturer interoperability. This is crucial to ensure precise and smooth cooperation between localization infrastructure components such as the CorivaSat (positioning satellites) and the devices to be tracked, such as the CorivaTags and devices from other manufacturers.

“The certification of our CORIVA products is an important step for ZIGPOS and an excellent example of the successful cooperation with TRUMPF. It confirms our commitment to quality and innovation. Our customers can now be sure that with CorivaTags and CorivaSat they have access to certified, standard-compliant technology that meets the highest demands” - explains Erik Mademann, CFO of ZIGPOS GmbH.

As one of the leading providers of UWB localization technologies, ZIGPOS supports the open omlox standard, which plays a key role in the further development of networked production and Industry 4.0.
